Unlock the Power of Data to Drive Medication Inventory Decisions

How can you leverage data to improve pharmacy operations?

Disruptions to your pharmacy supply chain put patient safety at risk. Actionable data is key to proactively addressing medication inventory gaps and preparing for uncertainties such as stockouts and diversion.

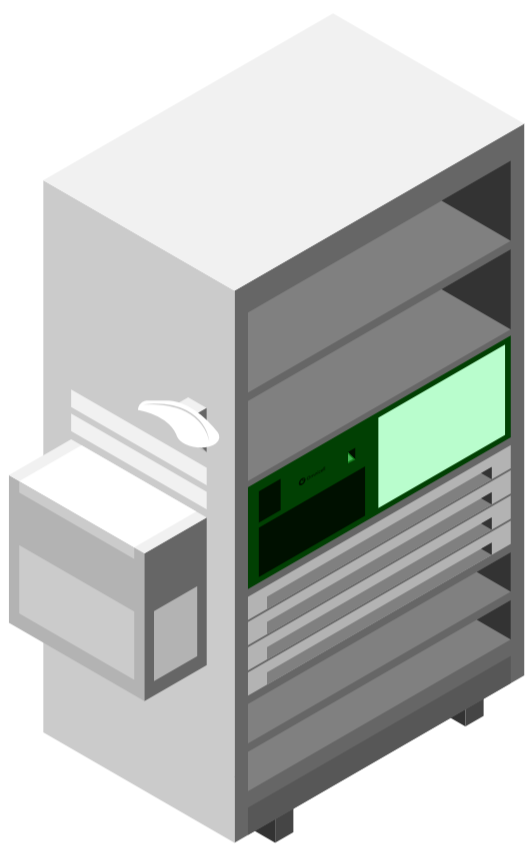

Control Spend and Minimize Waste

\$800M

US pharmacies and hospitals waste about \$800 million of expired drugs per year.
(Healthline, 2017)

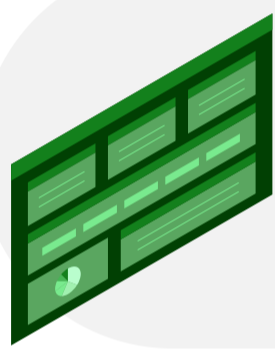

Automated Dispensing Cabinets hold a significant amount of medication inventory data:

35% of all stockouts could have been avoided by having a more accurate reorder point.

16% of inventory stocked above par levels or stocked over max.

20% of medications at risk of expiring without dead stock optimization.

Omniceil One

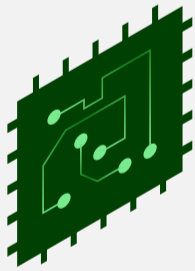

Aggregates medication inventory data into clear dashboards that surface actionable optimization recommendations to help minimize waste by 20-30% and reduce medication spend by 2%.

Curb Diversion

1 in 10 healthcare providers are abusing drugs.

53% of hospitals experienced a diversion event in the past year.
(Kit Check, 2021)

Omniceil One

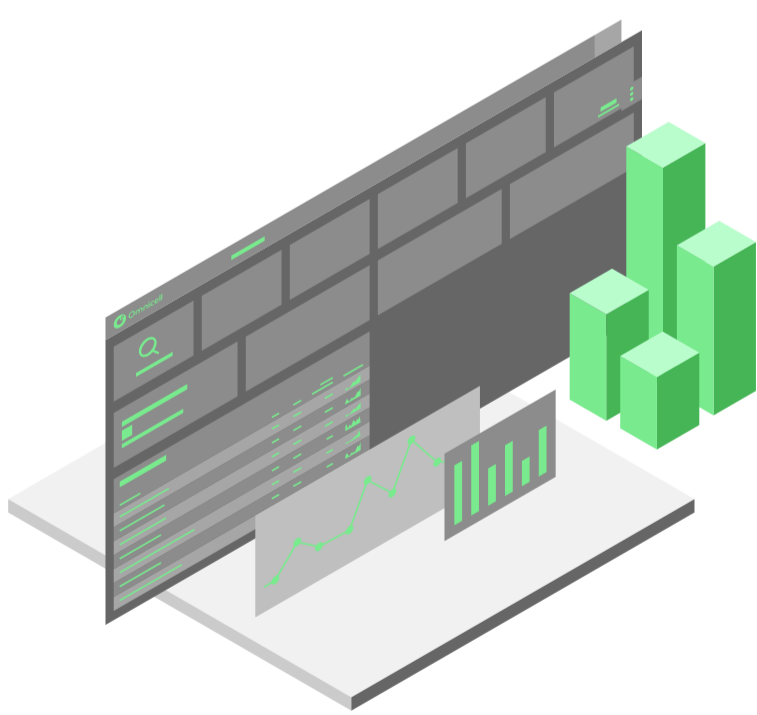

Leverages machine learning and artificial intelligence to surface potential drug misuse to help reduce diversion by 20-50%.

Optimize Labor Workforce

1 in 4 hospitals cut staff to ease budget pressures.
(American Hospital Association, 2019)

53% of health system pharmacists reported a high degree of burnout.
(ASHP, 2018)

Omniceil One

Automates tedious tasks such as manual counting, spending time locating a medication, or poring over spreadsheets and replaces this with trackable workflows to help coordinate communication between pharmacy leadership and pharmacy technicians.

Prepare for the Unexpected Through the Power of Data

Omniceil One provides unprecedented insight to your medication inventory, not only in day-to-day operations, but also when the unexpected happens.
